

Microsoft® Security Briefing for IT Professionals Microsoft Irvine - March 6, 2007

You are invited to attend a Microsoft® Security Briefing in Orange County exclusively for ISSA® Members. During this event you will have an opportunity to interact with other IT Security Professionals who are responsible for implementing security technology strategies at companies like yours. This event is designed to provide you with the opportunity to learn more about Microsoft's security strategy while interacting and sharing ideas with your peers.

In today's digital world, critical business information is often a target for theft and misuse. And, as new government regulations require businesses to operate with more transparency, competitors may have greater access to your intellectual property. Windows Vista™ provides multiple layers of protection to help your company address the increasing risk and expense associated with both information security and regulatory compliance, such as the protection of customer data.

This session will focus on the following:

- Introduction to Windows Vista™
- Windows Vista Security Enhancements
 - Windows® BitLocker™ Drive Encryption
 - Enterprise desktop firewall and IPSec Domain Isolation
 - User access control
 - Software control
 - Windows® Defender
 - Network Access Protection
 - Rights Management
 - EFS for Vista
 - Microsoft Forefront™ Client (Anti-virus, Anti-spyware)

The session will be moderated by **Ned Curic, Microsoft West Region Strategic Security Advisor**. Ned has an extensive background in security, and currently works with Southern California customers to help them formulate their security plans and design and deploy more secure IT environments.

We hope that you will join us at this informative session. Our goal is to provide an update on Microsoft's security initiatives, provide a true discussion forum for you to discuss security strategy and issues, and to share best practices.
